Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Wei J; Su EW, WPI; 2000-664992/64. N-PSDB; AAA37847 New human obesity protein binding protein-2 homologue nucleic acids, polynucleotides and polypeptides useful for producing medicament for treating obesity and/or obesity-related disorders.

Claim 9; Page 86-88; 92pp; English.

This sequence is a human obesity protein binding protein-2 homologue (hOB-BP2h) of the invention. The hOB-BP2h nucleic acids and polypeptides may be used for the manufacture of a medicament for the treatment of obesity and/or obesity-related disorders. The hOB-BP2h nucleic acids are useful as probes or amplification primers in the detection, quantification or isolation of gene sequences or transcripts, for recombinant expression of hOB-BP2h polypeptides, as immunogens in the preparation and screening of antibodies, and in sense or antisense suppression of one or more hOB-BP2h genes or nucleic acids, host cell or tissue in vivo or in vitro. Antigenic epitope-bearing peptides and polypeptides are useful for raising or screening antibodies that specifically binds to the hOB-BP2h polypeptides.

The invention relates to an isolated SIGIBC (sialic acid-binding Igrelated lectin) protein (1). Pharmaceutical compositions comprising (1) are useful for treating immune system diseases such as asthma, lenkaemia or other allergic or inflammatory diseases. Extracellular domains of (1) represent potential markers for screening, diagnosis, prognosis, follow or other allergic or inflammatory diseases. Extracellular domains of (1) is useful as a target for drugs which inhibit inflammation, tissue damage and remodeling in asthma, and indeping methods. (1) is useful as a target for drugs which inhibit inflammatory diseases such as allergic rhinitis, osteoarthritis, crohn's disease, psoriasis, rheumatorid arthritis, conjunctivitis, etc. (1) is also useful for menitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGIEC-BMS proteins. The nucleic acid molecules (11) are useful in diagnosis and/or prognosis methods, and to detect the presence and/or amount of SIGIEC-BMS nucleotide sequences and/or SIGIEC-BMS copy number is determined for detecting diseases or disorders associated with SIGIEC-BMS transcripts or proteins. The SIGIEC-BMS transcripts or proteins.

The SIGIEC-BMS proteins and in diagnostic imaging technology.

ANURTON ANURTON SUPPLIES THOUGHS are also used to detect, sort or isolate cells expressing SIGIEC-BMS proteins and in diagnostic imaging technology.

The invention relates to an isolated nucleic molecule that is at least 95% identical to 18 human cDNA sequences representing 12 novel genes encoding secreted proteins or a polynucleotide fragment of the cDNA sequence contained in American Type Culture Collection (ATCC) deposit No. defined in the specification, its species homologue, a variant or allelic

the polynucleotide having a polynucleotide capable of does not hybridising under conditions the polynucleotide, where the polynucleotide does not hybridise under stringent conditions to a nucleic acid molecule constraint and a nucleotide sequence of only A or residues. Also included are recombinant vectors, host cells (for producing the polypeptide), the secreted polypeptide (comprising a sequence that is at least 95% identical to a polypeptide fragment, domain, epitope, full-length protein, variant, allelic variant or species homologue), antibodies that specifically bind to the polypeptides, diagnosing, treating, preventing or amelicating a medical condition by administering the polynucleotide or the polypeptide, the gene corresponding to the cDNA sequence and cidentifying an activity in a biological assay and identifying the protein in the supernatant condition, and electing an activity or a biological condition, the protein in the supernatant consequence in a cell, isolating the supernatant, and detecting an activity or a biological condition, for preventing, treating, or amelicating a custom and publication, such as cancer, inflammation and other immune condition, for preventing, treating, or amelicating a medical condition, such as cancer, inflammation and other immune condition, and blood clotting disorders (many examples are corrected condition). The nucleic acids are also useful for circumosome identification). The nucleic acids are also useful for circumosome identification, the polypeptides and antibodies are useful for tissues immunological probes for differential identification of the tissues immunological probes for differential identification of the circumosome identification, seads. The polypeptides and antibodies are useful for increase or decrease storage capabilities, fat content or other continuous in maniformal conditional companies. The present is a secreted protein of the 2 61 FKAVTETTKGAPVATNHQSREVEMSTRGRFQLTGDPAKGNCSLVIRDAQMQDESQYFFRV 120 TGAALSSOGTKPTTSHFSVLSFTPRPQDHDTDLTCHVDFSRKGVSAQRTVRLRVAYAPRD 240 301 WGPRPLGLELPGVKAGDSGRYTCRAENRLGSQQRALDLSVQYPPENLRVMVSQANRTVLE 360 NLGNGTSLPVLEGQSLCLVCVTHSSPPARLSWTQRGQVLSPSQPSDPGVLELPRVQVEHE 330 FKAVTETTKGAPVATNHQSREVEMSTRGRFQLTGDPAKGNCSLVIRDAQMQDESQYFFRV 120 LVISISRDNTPALEPQPQGNVPYLEAQKGQFLRLLCAADSQPPATLSWVLQNRVLSSSHP 300 GEFTCHARHPIGSQHVSLSISVHYSPKLIGPSCSWEAEGLHCSCSSQASPAPSLRWWLGE 480 481 ELLEGNSSQDSPEVTPSSAGPWANSSLSLHGGLSSGLRLRCEAWNVHGAQSGSILQLPDK 540 KGLISTAFSNGAFLGIGITALLFLCLALIIMKILPKRRTQTETPRPRFSRHSTILDYINV 415 9 TGAALSSQCTKPTTSHFSVLSFTPRPQDHNTDLTCHVDFSRKGVSVQRTVRLVRVAYAPRD 1 MLLPLLLSSLLGGSQAMDGRFWIRVQESVMVPEGLCISVPCSFSYPRQDWTGSTPAYGYW ERGSYVRYNFMNDGFFLKVTALTQKPDVYIPETLEPGQPVTVICVFNWAFEECPPPSFSW 161 NLGNGTSLPVLEGGSLCLVCVTHSSPPARLSWTQRGQVLSPSQPSDPGVLELPRVOVEHE 1 MLLPLILSSLIGGSQAMDGRFWIRVQESVMVPEGLCISVPCSFSYPRODWTGSTPAYGYW 2; Indels 185; Gaps 6; Length 697; GEFTCHARHPLGSQHVSLSLSVHY------95.2%; Score 2576.5; DB 6; 73.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes human cell surface protein with gramehological, immunosuperssive, antianthamatory, antiasthmatic, antiaidabetic and dermatological activities, and can be used in gene therapy. (1) can be used for preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant immunoglobulin cell surface.receptor activity; a cellular adhesion disorder; a disorder related to hyper- or hypo-immunoglobulin receptor activity; a cellular adhesion disorder; a disorder related to hyper- or hypo-immunoglobulin receptor activity; a disorder related to aberrant signal transduction; a reproductive disorder; cell surface.receptor activity; a cellular adhesion disorder; a disorder related to aberrant signal transduction; a reproductive disorder; cellular exproductive disorder; a permortional uterine bleeding; amenorthees; primary dysmenorthoes; exual dysfunction; infertility; pelvic inflammatory disease; placental aromactase deficiency; premature menopause; placental dysfunction; hormone deficiency; oestrogen deficiency; aberrant showing of female primary exual characteristics; aberrant showing of female primary exual characteristics; precocious puberty; precocious pecudopuberty; incomplete isosexual precocity; premature thelarche; premature adrenanche; premature pubarche; premature adrenanche; premature pubarche; premature adrenanche; premature pubarche; premature adrenanche; premature adrenanche; premature pubarche; premature adrenanche; premature adrenanche; premature adrenanche; premature adrenanche; premature adrenanche; premature pubarche; pelversity incomplete isosexual precocity; premature thelarche; dysmenorrhoea; hypomenorrhoea; pubarche; premature adrenanche; premature adrenanche; premature adrenanche; premature pubarche; premature adrenanche; archititis; asthma; immunodeficiency disease; such as AlDS; leukaemia; rheunatorid arthitis; agrandiomature disease; inflammatory bowel disease; sepsis; acne; neutrophilia; neutrophilia; neutrophilia; neutrophilia; neutrophilia
```

New isolated nucleic acid molecule encoding BGS-19 polypeptides, useful for preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant immunoglobulin cell surface receptor

Example 1; SEQ ID NO 7; 224pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells for example proliferation, migration or differentiation) is typically governed by information is cecived from other cells and the immediate environment. The information is often transmitted by secreted purpoperides (for example information is often transmitted by secreted by properties (for example information is often transmitted by secreted by properties (for example intogenic factors, survival factors, cytotoxic factors, differentiation factors received from encourage and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the crimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or electing the expression of a tumour associated gene. The present

Claim 10; Fig 7; 695pp; English.

The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency with hypogammaglobulinemia of infancy, Burkitt's lymphoma, intermediate lymphoma, follicular lymphoma, type II lymphoma, intermediate lymphoma (Collicular lymphoma, type II lymphoma, intermediate lymphoma, pollicular lymphoma, type II hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anxylosing spondylitis. The PRO proteins are also useful for preparing a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.

The invention relates to an isolated nucleic acid molecule (cDNA)

Concing a human secreted protein, representing one of 8s novel genes.

Also included are recombinant vectors, host ceals (expressing the protein), the secreted proteins including their fragments, epitopes and homologues), an isolated antibody that binds specifically to the protein, diagnosing a pathological condition or susceptibility to a pathological condition based on the presence or absence of a mutation in the nucleic acid and diagnosing a condition based on the presence or absence of the mutation, diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition a packed on the presence of a mount of expression of the protein in a biological sample and diagnosing a condition based on the presence or amount of expression of the protein in a biological sample of the protein, preventing, treating or amelicating a medical condition by administering the nucleic acid or protein to a mammalian subject, identifying a binding partner to the protein, the gene corresponding to the cDNA sequence, and identifying an activity in a biological assay of comprising expressing the nucleic acid in a cell, isolating the contractive detecting an activity in a biological assay and protein in the supernatant having the activity; . The nucleic acids the protein in the supernatant having the activity; of a cardiant, Cardiovascular cen, Nephrotropic, Antinflammatory, Muscular Gen, Respiratory-Gen, Immunosuppressive, Cerebroprotective, Vasotropic, Nortropic, Antiallergic. The methods and compositions of the present invention are useful for diagnosing, treating, preventing preventing preventing preventing preventing of sorders related to the novel polypeptides, such as cancer, bacterial or viral infections, and neural, immune system, blood, New isolated nucleic acids encoding signal transduction pathway component polypeptides, useful for diagnosing, treating, and/or preventing disorders, such as cancer, infections, cardiovascular and inflammatory Claim 11; SEQ ID NO 141; 554pp; English. diseases.

The invention relates to an isolated SIGLEC (sialic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) are useful for treating immune system diseases such as asthma, leuksemia or other allergic or inflammatory diseases. Extracellular domains of (I) represent potential markers for screening, disagnosis, prognosis, follow-up assays, and imaging methods. (I) is useful as a target for drugs which inhibit inflammation, tissue damage and remodeling in asthma, and for inhibit inflammation, tissue damage and remodeling in asthma, and for inflammatory diseases such as allergic rhinitis, osteoarthritis, crohn's disease, psoriasis, rheumatorid arthritis, conjunctivitis, etc. (I) is also useful for monitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid molecules (II) encoding (I) are useful in diagnosis and/or prognosis methods, and to detect the presence and/or amount of SIGLEC-BMS nucleocide sequences and/or SIGLEC-BMS proteins in a biological sample. (II) are useful as nucleic acid probes are useful for screening genomic library to isolate a genomic clone of SIGLEC gene SIGLEC-BMS antibodies are also used to detect, sort or isolate cells expressing SIGLEC-BMS proteins and in diagnostic imaging technology.

AAUSTORY-AAUSTOSS represent human SIGLEC amino acid sequences of the
                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated SIGLEC (sialic acid-binding Ig-related lectin) protein molecules useful for treating immune system diseases such as asthma, leukemia, allergic rhinitis, psoriasis, conjunctivitis, Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MILPILLSSILGGSQAMDGRFWIRVQESVMVPEGLCISVPCSFSYPRQDWTGSTPAYGYW

The present invention describes secreted and transmembrane polypeptides and their polymouleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ34338, and AA¥41685 to AA¥41774 represent polymucleotide and polypeptide sequence given in the exemplification of the present invention

```
AAC78458 to AAC78599 represent polynucleotide and BST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78800 to AAC78897 represent PCR primers and probes used in the isolation of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DL;

```
The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when proliferation or differentiation of conditional part of stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adernal, hung, colon, cereat, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals and screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gurney AL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P, Chen J, Desnoyers L, Goddard A, Godowski PJ, Smith V, Watanabe CK, Wood WI, Zhang Z;
